euFIX DIN Adapters for FIBARO® Modules

FGD-212, FGR-223, FGS-213, FGBHS-213,
FGS-214, FGS-223 and FGS-224

The euFIX DIN Adapters are used to safely install the Fibaro® modules on DIN (TH35/TS35) type rail in the electrical switchboard. The examples of modules that can be placed in the switchboard include: switches for heaters, fans, sprinklers, valves and switches for infrastructure integration. For safety reasons use of the certified adapters in switchboards is forced by the law regulations in some European countries. For every Fibaro® module type an appropriate euFIX Adapter type is dedicated. The euFIX DIN Adapter consists of the standard DIN case and the base board with the screw terminals to connect the power and signal wires.

All euFIX adapters are available in 2 versions: with or without buttons. The micro-push-buttons S1 & S2 are used for control, diagnostics, inclusion of the module within the Z-Wave system or to remove it from the system without opening the adapter's case. Please note that the Fibaro® modules are not included and need to be purchased separately.

Technical Specification:

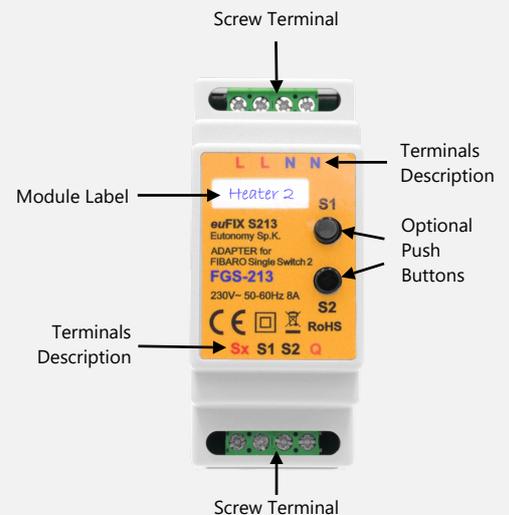

Supply voltage:	230 V AC +/-10%, 50–60 Hz
Load current:	no more than appropriate Fibaro module limits
Dimensions:	34.8 x 87.3 x 64.7 mm
Width in TE module units:	2 TE modules
Conductor wires cross section:	max. 2.5 mm ²
Maximum length of wires connected to Sx, S1, S2 inputs:	10 m (20 m for S212 & S222)
Operating temperature:	0°C to +50°C
Relative humidity:	≤90%, no condensation.

euFIX Adapter installation in 4 steps:

1. Open the euFIX Adapter's cover

Use a flat screwdriver to pry the cover latch

2. Check the Fibaro® module type on the board

Fibaro module type mark

3. Insert the Fibaro® module firmly on the header pins up to the full depth and tighten all screws

Put the Fibaro module on the header pins

4. Close the cover, mount the Adapter on the DIN rail, connect the cables and label the module.

Content of the packaging:

1. euFIX DIN Adapter.
2. Instruction manual.

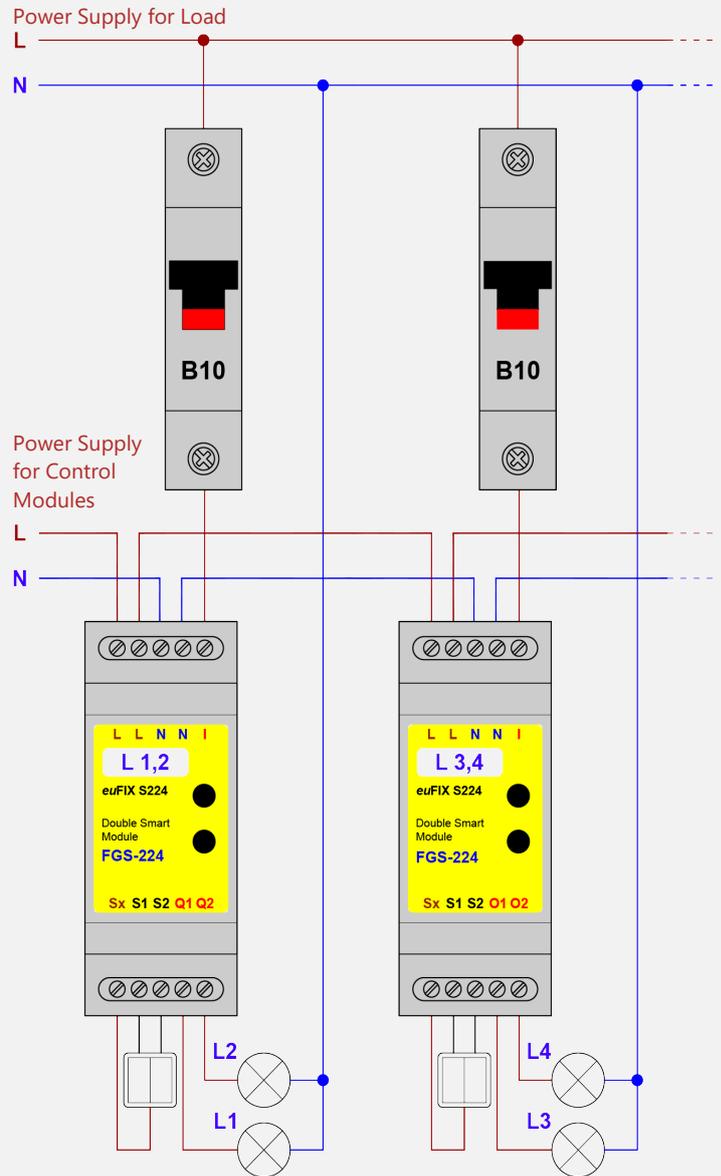

Where to order:

- Fibaro® showrooms & sales network →

euFIX additional features:

The D212 Adapter (for Fibaro® Dimmer 2) has an additional terminals (marked B-B) where the optional Fibaro Bypass FGB-002 can be connected. Most euFIX Adapters have duplicated L and N power screw terminals that are internally connected by high-current bridges. In case of low load current the modules power supply can be cascaded, solving the problem of safe branching of phase wires. Nevertheless, at any point of the circuit, the load current must not exceed 10 A.
